DIXIE HYBRIDS

PLANT DELTA & PINE LAND GROWN

Dixie 33 is probably the highest yielding full season white prolific you could possibly plant on your land. Dixie 33 has one single cross parent in common with 17. It stands and picks well, ears about 4 feet high, makes excellent silage and has good husk coverage for protection against insect and weather damage. Like all Dixies, planting rates are not as heavy as the "one ear" northern hybrid varieties—If the stand is thin Dixie 33 will "load up" with more good big heavy ears.

A yellowkerneled heavy eared, full season, semi-prolific corn that stands exceptionally well because it has a big strong root system. Dixie 22 is preferred for livestock because of its deep soft grain. Half the cobs are red and half are white. Dixie 22 works well in mechanical pickers and is recognized as the best yellow hybrid for the south. Does not grow too tall and matures early for August and September harvest.

Time proved full season white prolific. Widely used over the south, Dixie hybrids are all noted for their ability to "load up" with ears when planting accidentally results in a scattered stand. No. 17 will actually sucker out and make good ears on the suckers. Many northern bred corns are "single ear" corns and if you don't get the proper stand—you just get a little bigger ear. Dixie 17 has fair husk coverage but is so prolific it sometimes has a tendency to lodge. Cribbing is not recommended in the extreme lower south.

Be SURE OF Top Corn Profits

You must *protect* your investment in time, fertilizer and land by planting the *best* seed corn you can find. In recent years the hybrids have been conclusively proved tops profit-wise, but don't kid yourself—all hybrids are not alike. You must get one you can be *sure* will make money for you. With Dixie you get bred-in vigor and prolific yield.

In the opinion of experts, the Dixie varieties have on the average—over their area of adaptation—out yielded all other corn. You need this sure "TOP" yield to make money out of your corn crop, so make certain of your seed supply by buying D & PL Dixie Hybrid seed corn today.
